Performance Evaluation Of Industrial Systems
Basic approaches to discrete simulation have been process simulation languages (e.g., GPSS) and event-scheduling type (e.g., SIMSCRIPT). The trade-offs are that event-scheduling languages offer more modeling flexibility and process-oriented languages are more intuitive to the user. With these considerations in mind, authors David Elizandro and Hamd[...]

Multiple Perspectives On The Effects Of Evaluation On Performance
In the field of psychology, research areas often develop in relative isolation. Researchers in different areas are either not aware of, or seem to fail to see the relevance of findings from other areas even though it would seem that the findings are directly relevant to their own. One striking example of this is to be found in research that focuses[...]
